

How to choose 220kV substation electrical equipment?

220kV substation electrical equipment selection by the main wiring design and the size of the substation load, usually choose a combination of electrical equipment with a small footprint, so as to reduce the amount of land occupied as much as possible.

What are electrical energy storage systems (EESS)?

Electrical energy storage systems (EESS) for electrical installations are becoming more prevalent. EESS provide storage of electrical energy so that it can be used later. The approach is not new: EESS in the form of battery-backed uninterruptible power supplies (UPS) have been used for many years. EESS are starting to be used for other purposes.

What is the safety distance of 220 kV substation?

The safety distance of the 220 kV substation is 10 meters. National regulations: distance below 1kV is 4 meters, distance between 1-10kV is 6 meters, distance between 35-110kV is 8 meters, distance between 154-220kV is 10 meters, distance between 350-500kV is 15 meters.

How far is a 220 kV high voltage line?

National regulations: distance below 1kV is 4 meters, distance between 1-10kV is 6 meters, distance between 35-110kV is 8 meters, distance between 154-220kV is 10 meters, distance between 350-500kV is 15 meters. The electromagnetic radiation intensity within one hundred meters of a 220 kV high-voltage line is greater than 0.4 micro Tesla. 1.

Are energy storage devices dangerous?

Energy storage devices can often supply significant short-circuit currents. Even at extra-low-voltage (ELV) this can present a serious risk of overheating and could lead to burns and/or fire. Means of protection against electric shock may be exacerbated when the installation is operating off grid.

What is the IET Code of practice for energy storage systems?
