What type of capacitor is a 500V to 8KV capacitor?

500V to 8KV High Voltage Ceramic Disc Capacitor -HVC is a type of High Voltage Ceramic Capacitor.

What is a ceramic capacitor?

A capacitor is a passive electronic device that stores electric charge. Ceramic capacitors consist of two or more alternating layers of ceramic material as the dielectric and metal layers acting as the non-polarized electrodes. Applications include automotive,bypass,decoupling,filtering,RF,and ESD protection.

What is the maximum operating temperature of TDK capacitors?

Please refer to P-3~4 about the product dimensions. The maximum operating temperature of +105°C includes capacitor self-generated heat of up to 20°C. After capacitor is mounted on board,the storage temperature range is applied. TDK's standard product is vertical kink. TDK recommends short leads for bulk products.

What are capacitors made of?

The capacitors consist of a ceramic disc both sides of which are silver-plated. Connection leads are made of tinned copper having a diameter of 0.6 mm or 0.8 mm. The capacitors are supplied with kinked leads and lead spacings of 5 mm or 7.5 mm and 10 mm. Encapsulation is made of epoxy-resin,flammable resistant in accordance with "UL94V-0".

What does a capacitor Mark mean?

Marking indicates capacitance value and tolerance in accordance with "EIA 198" and voltage marks. The capacitors consist of a ceramic disc both sides of which are silver-plated. Connection leads are made of tinned copper having a diameter of 0.6 mm or 0.8 mm.
