

After removing the power supply and cleaning the dust how to install the battery

How to clean a power supply unit without tearing it apart?

Now we are ready to clean the power supply unit. As we mentioned earlier, if your PSU does not have much dust, you can clean it without tearing it apart. You should get a probe or stick and insert it in between the fan blade. This will prevent the fan from rotating while cleaning.

How to clean a PC with a power supply?

Connect the cables coming from the PSU to the respective ports in the motherboard. Put the side panel and place the casing in its proper place. Reconnect all the external cables and run the PC. We often tend to clean the PC on a regular interval and overlook the condition of the power supply unit inside.

Why should you maintain a clean power supply unit (PSU)?

Maintaining a clean power supply unit (PSU) is essential for the optimal performance and longevity of your computer system. Dust buildup can obstruct airflow, lead to overheating, increase noise levels, and even cause hardware failure.

How to clean a PSU without disassembling it?

Pull the PSU from inside the casing. Be careful not to damage the motherboard and other components while doing so. Bring the PSU out and keep it on the antistatic mat. If the PSU has not accumulated much dust, you can clean it without disassembling the power supply unit. So, the steps given below are optional for such a condition.

Should you clean your power supply unit yourself?

Regularly performing this cleaning process can significantly improve the lifespan and performance of your power supply unit. However, it's important to note that if you are uncomfortable or unsure about performing the cleaning process yourself, it's always best to seek assistance from a professional technician.

How do I install a battery in a power supply unit?

3. Slide the power-supply unit cage release latches to the unlock position. 4. Lift the power-supply unit cage and rotate the power-supply unit cage away from the chassis. 5. Steps 1. Insert a new coin-cell battery (CR2032) into the battery socket with the positive side facing up, and snap the battery into place. 2.
