

Is a new Dutch home battery based on old technology?

A new Dutch home battery has a new twist on old technology: gel lead-acid batteries, for safe operation. From ESS News SS4U, a new company from parent TSS4U, a Dutch off-grid solar specialist and engineering firm, has launched a new battery designed for residential use. It is based on what's old-is-new-again technology: lead-acid, with a twist.

What are Arkimedes batteries?

The batteries provided by Arkimedes are top branch and are based on Lithium Iron Phosphate (LFP) technology. LFP batteries are much safer, more sustainable and have a longer cycle life than Nickel Manganese Cobalt (NMC) batteries. The energy and power densities of LFP systems are generally lower than those of NMC batteries.

Are Arkimedes batteries safe?

Arkimedes provides LFP batteries, which are safer than other Li-ion battery technologies like NMC due to the higher stability of the LFP material. The battery management system (BMS) helps prevent thermal runaway, while built-in safety features like fire extinguishing systems in large-scale storage batteries add extra protection.
