Battery Parts Coding Complete Picture

What is a battery code?

Batteries have a code that indicates the size and type of battery. This code differs depending on the specification of the battery construction. There are 3 different specifications in the world that regulate the size,power and performance of batteries and they are the European (EN),the Japanese (JIS) and the American (BCI).

How many digits are in a battery code?

European standard batteries use 2 types of codes. One comes from the older coding according to the German DIN standard and the other is the newer coding according to the European Union (EN) standard. It is always five digitsand consists of two parts:

Do aftermarket batteries have a valid part number?

Aftermarket batteries may NOT have a valid Part Number,Vendor code or Serial number. Ross-Tech cannot offer assistance if the necessary information is missing. This procedure applies to battery replacement in vehicles using a separate battery management control module. Address 61: Battery Regul.

How do I code a new battery in my car?

Simply turn the steering wheel fully to the right and then fully to the left. This should reset the sensor,clearing any error codes. With this detailed guide,you can now code a new battery in your car using VCDS. Checking for error codes and calibrating the steering angle sensor completes the process,potentially saving you significant costs.

Why is coding important when replacing a car battery?

Modern vehicles rely on advanced electronics that depend on a consistent power supply. When replacing a battery,the car's control unit needs to know the new battery's capacity to optimize its performance. Coding ensures precise battery regulation,which is crucial for the longevity and proper functioning of the car's electrical components.

What is a 555 59 battery code?

E.g. 59 is used for the right position of the positive terminal. Overall the battery code is as follows: 555 59 which indicates that the battery is 12V,has a capacity of 55AH and usually has the position of the positive terminal on the right. The WINNER PREMIUM HP,PREMIUM and ADVANCE series use this code.

You have to buy AGM battery. Your car is coded to use 90Ah AGM battery and you should buy the same specification. There will be no problem with coding new battery to car, only registration will be needed. If you buy non AGM you should code this to car and START/STOP will never work. Without coding your new battery will die soon.
