

Are battery storage systems the future of power systems?

Battery storage systems are emerging as one of the key solutions to effectively integrate high shares of solar and wind renewables in power systems worldwide. IRENA analysis illustrates how electricity storage technologies can be used for a variety of applications in the power sector.

What will the battery energy storage industry look like in 2025?

This year the battery energy storage industry is poised for further innovation, Connected Energy explores the key themes that we expect to see in 2025. The demand for clean energy is soaring across the globe, fuelled by ambitious net-zero goals, increasing renewable energy adoption, and the transition to electric vehicles.

How can battery energy storage improve energy security?

As the adoption of renewables continues to grow exponentially, battery energy storage will play an increasing role in underpinning energy security - either through increasing capacity to reduce grid upgrade requirements or by time-shifting energy. This will help reduce reliance on energy imports.

When will battery energy storage systems (BESS) become more popular?

2024 was a record year for deployment of battery energy storage systems (BESS). We predict even higher implementation in 2025. A marked increase in the availability and use of second life batteries within the energy storage sector with EV manufacturers seeking to maximise the value of batteries.

Are small-scale batteries the future of energy storage?

Currently, utility-scale stationary batteries dominate global energy storage. But by 2030, small-scale battery storage is expected to significantly increase, complementing utility-scale applications.

Is behind-the-meter battery energy storage a problem?

Behind-the-meter battery energy storage is facing challenges on its own. In many jurisdictions, legacy electricity tariff structures do not reward the deployment of behind-the-meter battery storage, which continues to fall behind grid-scale battery energy storage in the projections of the World Energy Outlook 2022.
