Why is my BCM not taking a full charge?

It is not your BCM. It is the battery. If you are charging at 13.8-14v then the battery is not taking a full charge. The way the BCM is designed if it fails it is not supposed to interfere with battery charging of either battery as a fail safe. Have your battery load tested. I have a strong feeling it will fail the load test.

How do I know if my battery control module is working?

The battery control module can be tested. The best way to test it is with a scan tool that is operated by a qualified/professional technician. A scan tool will allow you to read and clear any diagnostic trouble codes that may be present. If there are no trouble codes, then the battery control module is working properly.
