Reading speed for English text is slower for text oriented vertically than horizontally. Yu, Park, Gerold, and Legge (2010) showed that slower reading of vertical text is associated with a smaller visual span (the number of letters recognized with high accuracy without moving the eyes). Three possib ...

Electroencephalogram (EEG) based emotion recognition has become an important topic in humancomputer interaction and affective computing. However, existing advanced methods still have some problems.

Figure 5 depicts the results of attention and recognition for horizontal and vertical characters, both of which confirm that the method works well. The main purpose of our study is to compare the performance between a supervised proposed method and an unsupervised baseline method for text direction. We would like to emphasize that our model ...

These individual digits are segmented from an edge image through the vertical projection. Furthermore, the individually segmented digits are filled and thinned to detect the shapes of the digits. From these segmented digit shapes the Horizontal and Vertical Binary (HVB) pattern features are extracted. This is the key contribution of this paper.

The meter image has been captured from a fixed distance for better recognition purposes. The horizontal and vertical pattern is generated in [3, 4] to segment each digit which is collected from the ...
