

## **Battery power supply gets hot when turned on**

Why is my laptop adapter Hot?

However, if the adapter is hot enough to hurt you after touching it for a few seconds, there could be a serious issue. The first thing to check is whether or not the laptop battery is gaining any charge with the adapter plugged into an outlet.

Why is my laptop battery not charging?

The first thing to check is whether or not the laptop battery is gaining any charge with the adapter plugged into an outlet. If it is, then the issue is most likely with the adapter itself. If the battery is not charging, there could be an issue with the power connection to the laptop. The adapter may still be at fault, as well.

Is a hot power adapter a problem?

A relatively warm power adapter is normal, especially when the laptop is in use while the battery is charging. However, if the adapter is quite hot, enough that it could hurt your hand after touching it for a few seconds then you need to consider replacing the AC adapter. Run hardware diagnostics test on battery and Charger:

Why does my laptop keep getting hot while charging?

It is normal for a laptop to generate some heat while charging. But if it is getting overheated during charging, this is a matter of concern. Also, if you are doing heavy graphics work, like playing video games while charging, your laptop temperature may go high. Read next: Laptop battery stuck at 0,50,99% charging.

Is a warm power adapter a problem?

I understand you facing battery heating issues. A relatively warm power adapter is normal, especially when the laptop is in use while the battery is charging. However, if the adapter is quite hot, enough that it could hurt your hand after touching it for a few seconds then you need to consider replacing the AC adapter.

What should I do if my laptop adapter is hot?

If you notice the adapter is extremely hot, turn off your computer and unplug it from the wall outlet. Once the adapter has cooled off, plug it back in and turn on the laptop. Monitor the temperature of the adapter. If it becomes hot again, take the laptop and power adapter to a computer repair shop and have the technicians check it.

**Method 1: Run the Power Troubleshooter.** You can run the Power troubleshooter to adjust your computer's power settings. The Power troubleshooter checks ...

Windows power options will give you 100% CPU power and discrete graphics when plugged in. That makes things run hot. On battery, power is scaled back and uses integrated graphics to...

## Battery power supply gets hot when turned on

e) Select the Power options from the list. f) Click Next to Run the Power Troubleshooter. Method 2: Change the Power plan of your computer. A power plan is a collection of hardware and system settings that manages how your computer uses and conserves power.

The idea is to lessen the stress of your 150W power brick (main PC power supply) that gets really hot if i understood well. Hence my suggestion is when you have your USB drive plugged in (one USB cable) you can you the USB drive's external power source brick as well to offload the 150W one.

Step 3: Check the Power Supply. Unplug the Power Cable: Disconnect the power cable from the power supply unit (PSU). Hold the Power Button: Press and hold the power button for ...

When I plug the battery in and turn the thing on I get 1A flowing to the battery. The problem I'm getting is that diode D1 (1N5404 rated 3A - schematic says 1N4004, but I've replaced it on the board) and 2N6107 are ...

Essentially, the heaters are always connected to the 12/24V supply and they are turned on by enabling the FET switch to connect the return side of the heater to ground. So, what has probably happened is that your printer has its heater's return side shorted to ground, somewhere.

Sadly it didn't but the weird thing is that the battery is charging correctly according to the power light. So I'm here to see if someone has any idea if this is a sign that the computer might not be dead or it is just that the battery part didn't get damaged but everything else did.

Then maybe the fan should be on I know if your battery starts messing up that fan will come on and won't shut off so if in fact the fan works with the solid 12 volt power supply like connected directly to a battery if you know ...
