

How many batteries do I need for a 220VAC inverter?

To get 220VAC from an inverter, you need to provide a minimum DC voltage of 311VDC. Therefore, you would need 26 12V batteries in series to feed the inverter. Keep in mind the power requirements and the desired runtime.

Can a battery produce 220V AC without an inverter?

Batteries cannot generate AC voltage without an inverter, even if wired in series to achieve 220V. The inverter is necessary to convert the input supply to AC voltage.

How do you convert 220V to 12V?

I use an UPS to convert and store 220V electricity into batteries of 12V. then, when i need it, i use another circuit to power my computer no I take the 12v, pass it through an inverter to recreate 220V and that only to send it all to my LCDs and PSU which have the job of taking the 220v and regulating it to 12v (and a few smaller) again.

Can 12V be 230V?

@Lundin, if 12V can be 230V, then we can make 230V from small 12V wind turbine which is really easy. I want to know details. Why do you think the voltage matters?

How do you convert AC to DC at a high voltage?

Often the simplest and cheapest means of achieving PFC is to convert the AC to DC at a high voltage using a DCDC (this is called Active PFC). The output voltage is this high voltage bus passed through a second DCDC or DCAC converter.

How does a 230V SMPS work?

A 230VAC, that's "AC", input is quoted as 230V "RMS". That means a (sine wave) peak value of 230×1.414 Volts which is approx 325Volts. AC enters the SMPS through a filter and is rectified (turned to DC) and that voltage (325-ish minus a couple of volts across the rectifier) is stored on a "reservoir" capacitor.
