

When will phones be able to replace batteries in the EU?

This week, the European Council officially agreed to the new regulation. Now, the only step left is for the European Council and Parliament to sign on the dotted line. Once they do, the clock starts ticking: any manufacturer wanting to sell phones in the EU must ensure those phones have replaceable batteries by 2027.

Will the EU bring back user-replaceable batteries?

Bringing back user-replaceable batteries for consumers will be the second "major" shift in the design of smartphones in the EU. The first came after the EU voted in favor of making USB-C the standard charging port for Android phones, iPhones, and laptops.

Will smartphones be able to replace batteries in 2027?

By 2027, all phones released in the EU must have a battery the user can easily replace with no tools or expertise. The regulation intends to introduce a circular economy for batteries. In the middle of June, we shared a news report about the future of replaceable batteries in smartphones.

What are the new EU regulations on replaceable batteries?

The EU's new regulations on replaceable batteries aim to avoid another Chlorofluorocarbon-esque scenario-- going all in into innovation without realizing the potential harm it could create in the long run-- and mark a significant milestone in promoting sustainability, resource recovery, and consumer empowerment.

Are rechargeable batteries a new era of smartphones?

The European Union (EU) is set to usher in a new era of smartphones with batteries that consumers can easily replace themselves. Earlier this week, the European Parliament approved new rules covering the design, production, and recycling of all rechargeable batteries sold within the EU.

How will the European Commission improve battery life and spare parts availability?

The European Commission is seeking to improve phone and tablet battery life and spare parts availability. In draft proposals published this week, European regulators are planning to force phone manufacturers to supply at least 15 different parts to professional repairers for five years after a device first goes on sale.

Campaigner, Right to Repair Europe. This week, the European Parliament voted in favor of making batteries more sustainable including making them removable and replaceable. MEPs were voting in plenary on their report ...

Step 3: Disassemble the Battery Pack. Once you're geared up, it's time to disassemble the battery pack. Carefully use your screwdriver to open the casing. Be gentle; some battery packs are held together with clips and can break if forced. As I pried open my flashlight, I was greeted by a maze of wires and components.
