What are electric car charging piles?

Electric car charging piles are fixed structures on the ground that provide AC electric energy for electric cars with on-board chargers using special charging interfaces and conduction modes. They have corresponding communication, charging, and safety protection functions. (How to Charge an EV imported from China)

What is a charging pile?

A charging pile is a type of electric car charging station component. They can be fixed on the ground or wall and installed in public buildings, residential parking lots, or public charging stations. Charging piles can be used to charge various types of electric cars according to different voltage levels.

How does a car charging pile work?

From the external structure, the charging pile is clearly divided into components such as the pile body, cable, and charging gun head. At first glance, it seems that the charging pile performs the charging work, but for the AC charging pile, the real charging process is completed by the on-board charger (OBC) built into the car.

What meter do I need for a 7kw charging pile?

Charging piles above 7kw require a 380V meter. As mentioned above, the choice should be based on the power of the vehicle's own charger, while considering expansion needs such as changing vehicles. The mainstream new energy vehicle brands now all support 7KW charging piles.

How long does it take a 7kw battery to charge?

For example, if the battery pack of a car is 56 degrees (KWH), the 7KW charging pile is nominally charged at 7 degrees per hour. Theoretically, $56/7 = 8$, that is, 8 hours to fully charge. It can be fully charged overnight. The current vehicle model information generally indicates the fast charging and slow charging time.

How to choose a 22kW charging pile?

So if you have two cars at home, or consider future expansion, you can consider choosing a 22KW charging pile. In short, you must choose a charging pile that is not less than the power of the on-board charger and is compatible. Note that charging piles above 7kw require a 380V meter.
