### What is the power of a charging pile?

Power and compatibility The power of a charging pile refers to the maximum amount of electrical energy that can be output per hour, in kW or "kilowatts". AC charging piles are generally divided into 3.5kw,7KW,11kw,and 22KW specifications according to power.

#### What is an AC charging pile?

Therefore, the AC charging pile can be understood as a set of connection and control equipment with a protection system. It implements a unified electrical protocol (national standard regulations) to communicate with the on-board charger to achieve functions such as opening and closing the scheduled charging.

#### What information does a charging pile display?

Information display screen Some charging piles are equipped with information display screens, which can display information such as voltage, current, real-time power, temperature, charging time, etc. Some can also display the working status of each phase of the three-phase charging pile.

#### How does a car charging pile work?

From the external structure, the charging pile is clearly divided into components such as the pile body, cable, and charging gun head. At first glance, it seems that the charging pile performs the charging work, but for the AC charging pile, the real charging process is completed by the on-board charger (OBC) built into the car.

## How does a 4G charging pile work?

The charging pile has a built-in 4G SIM card, and then connects to the Internet through traffic, so that users can remotely control it through APP and mini-programs, which is more convenient. The 4G version of the product that you usually see has this function, of course, the price is higher.

## What meter do I need for a 7kw charging pile?

Charging piles above 7kw require a 380V meter. As mentioned above, the choice should be based on the power of the vehicle's own charger, while considering expansion needs such as changing vehicles. The mainstream new energy vehicle brands now all support 7KW charging piles.

Accordingly, a multidimensional discrete-time Markov chain model is utilized, in which each system state is defined by the photovoltaic generation, the number of EVs and the state of energy storage [12]. The work in [13] apply the energy storage in the charging station to buffer the fast charging power of the EVs, it proposed the operation mode and control strategy ...

adding 1MW and 1.5MW of energy storage to the charging pile can increase the profit of the charging . pile
