What is a lead-acid battery?

A lead-acid battery is a type of rechargeable battery that uses lead and lead dioxide plates immersed in sulfuric acid to store and release electrical energy. Even with the advent of technologies like Li-Ion, lead-acid batteries continue to dominate the market for 12V batteries installed in passenger cars and commercial vehicles.

What causes a lead acid battery to malfunction?

Battery malfunction is seldom caused by a factory defect; driving habits are the more common culprits. Heavy accessory power when driving short distance prevents a periodic fully saturated charge that is so important for the longevity of a lead acid battery.

How do you maintain a lead acid battery?

Prioritize Safety: Conserve battery by minimizing non-essential electrical use and keeping safety systems active during long drives. **Clean Installation:** Keep the battery and terminals clean to prevent discharge and enhance charging efficiency. **How bad are lead acid batteries for the environment?**

What happens to used car batteries at the end of their life?

At the end of their life, VARTA's Automotive ensures that used batteries are collected and recycled. Their Krautscheid, Germany facility, with over 115 years of lead recycling experience, processes enough lead annually to match about 4.5 million car batteries.

Can a battery test prevent a car breakdown?

Statistics from the German Automobile Association ADAC show that now, 42 % of all car breakdowns are caused by a defective or exhausted battery. These can be prevented with regular battery tests. Preventative and regular battery checks are becoming increasingly important. Automotive supports workshops with a Battery Test Check Program.

How often should a car battery be charged?

Charge Care: Regularly monitor and charge the battery, especially during long-term parking or winter storage. **Charge every two months** if used sporadically. **Check Charge:** Regularly check battery charge, particularly in cold weather or after short trips. Dimming headlights indicate low charge.
