

What are the different types of charging piles?

Charging piles are mainly divided into AC charging piles and DC charging piles. AC charging piles have a smaller body, are flexible for installation, and typically take 6-8 hours to fully charge. They are suitable for small electric vehicles and are commonly used in public parking lots, large shopping centers, and community garages.

What are electric car charging piles?

Electric car charging piles are fixed structures on the ground that provide AC electric energy for electric cars with on-board chargers using special charging interfaces and conduction modes. They have corresponding communication, charging, and safety protection functions. (How to Charge an EV imported from China)

How does an electric vehicle charging pile work?

An electric vehicle charging pile provides two charging modes: regular charging and quick charging. Users can swipe a specific charging card on the human-computer interaction interface provided by the charging pile to carry out corresponding operations such as selecting the charging mode, charging time, and cost data printing, etc.

What is a public charging pile?

Public charging piles are purchased by public service organizations such as government for use by any electric vehicle owner, such as public parking lots.

How much does a charging pile cost?

The price of a charging pile can range from hundreds to thousands of RMB, with the main difference being in power. The cost of a 11KW charging pile is around 3000 RMB or more, a 7KW charging pile costs between 1500-2500 RMB, and a portable 3.5KW charging pile is priced under 1500 RMB.

How many watts can a charging pile charge?

The maximum charging power of an AC charging pile is 7KW. The charging power of a DC charging pile is generally 60KW to 80KW. The input current of a single gun on a charging pile can reach 150A--200A. This is a significant demand on the power supply line. In some old communities, even installing one may not be possible.
