How long do solar panels last?

But, in general, you can expect your solar panels to be a good energy source for a long time, usually around three decades. As solar panels get older, there are a few signs that show they're not as young as they used to be. One big sign is if they're not making as much electricity as before. This can be a slow change that happens over many years.

Which solar panels have the longest lifespan?

Monocrystalline solar panels are identified as having the longest lifespan, up to 40 years, due to their high-quality single silicon crystal construction, making them a preferred choice despite a higher initial cost.

How long does a solar system last?

Everybody's solar system is different, but most systems can be expected to last at least 25-30 years before performance degrades significantly. With the average payback period around 8 years, that's more than enough time for a system to pay itself off several times over.

Are solar panels durable?

Solar panels are generally very durable. Most solar panels are designed and tested to withstand the elements like hail, high winds, and heavy snow loads. And thanks to their lack of moving parts, solar panel systems usually require little to no maintenance. Still, maintaining your solar panels can boost production.

What is a solar panel warranty?

Solar panel warranties come in a variety of lengths and coverages, typically reflecting the quality and anticipated lifespan of the panel. Most top-quality panels boast an industry-standard 25-year warranty. However, the depth of coverage within these warranties can vary significantly. Here's what you can expect from solar panel warranties:

Do solar panels go through a natural degradation process?

Yes, a solar panel goes through a natural degradation process as part of its lifecycle. This means that its ability to convert daylight into electricity is very slightly reduced each year. Why do solar panels degrade? Solar panels degrade mainly because of exposure to the elements.
