

# How much does the new lithium battery cost in Paraguay

How much does a lithium ion battery cost in 2023?

In 2023, lithium-ion battery pack prices reached a record low of \$139 per kWh, marking a significant decline from previous years. This price reduction represents a 14% drop from the previous year's average of over \$160 per kWh.

How much does a lithium ion battery cost?

Currently, 54% of the cell price comes from the cathode, 18% from the anode, and 28% from other components. The average price of lithium-ion battery cells dropped from \$290 per kilowatt-hour in 2014 to \$103 in 2023. In the coming months, prices are expected to drop further due to oversupply from China.

Why are lithium-ion batteries so expensive?

The cost of raw materials, particularly lithium carbonate, plays a significant role in the pricing of lithium-ion batteries. The recent decrease in lithium prices has been a major factor in lowering battery costs. As lithium is a key component in these batteries, fluctuations in its price directly impact the overall cost of battery production.

How have lithium-ion battery prices changed over the last 10 years?

Lithium prices, for example, have plummeted nearly 90% since the late 2022 peak, leading to mine closures and impacting the price of lithium-ion batteries used in EVs. This graphic uses exclusive data from our partner Benchmark Mineral Intelligence to show the evolution of lithium-ion battery prices over the last 10 years.

How will Lithium prices affect EV battery prices in 2023?

Effect on Battery Prices: The decrease in lithium prices is expected to further lower the prices of lithium-ion batteries, continuing the trend observed in 2023. In June 2024, the average prices for EV battery cells saw a decrease: Square Ternary Cells: Priced at CNY 0.49 per Wh, down 2.2% from May.

How does competition affect the price of lithium-ion batteries?

This competition often results in price reductions as companies strive to offer more attractive pricing to gain market share. The price of lithium-ion batteries has been on a downward trend, reaching a record low of \$139 per kWh in 2023 and continuing to decrease into 2024.
