How do I fix a bad charger port?

If everything is okay, the problem is with the charger port itself, and you must remove and replace it. To do this, carefully disconnect any wires or cables attached to the charger port. Use a soldering gun (or iron) to remove the old solder joints on the four corners of the charging port, as shown below.

What should I do if my Charger won't charge?

Be careful when inserting or removing the charger from the port. Also, don't force it in or out, as this can break the connectors inside the port. Keep the port clean and free of debris. Dust and dirt can build up over time and cause problems with charging. Don't bend or twist the cord too much, as this can damage it.
