To secure your valuable solar panels to the wall and position them for maximum sun exposure. The best types of mounting systems are those that withstand the elements and adjust according to your needs - much like a steadfast tree adjusting to the wind.

Why do solar panels need a wall mount?

Maximising sun exposure is crucial for solar energy production. Wall mounts optimise this exposure by positioning the solar panels at an angle that "catches" the sun. It's the fine-tuned positioning that elevates them from an energy-saving mechanism to sparks of ingenuity, boosting what nature gives us.

If a single collector is being installed, simply connect the solar liquid return-pipe to one of the lower collector ports and the flow-pipe to one of the upper ports, blocking the other two ports ...

α is the angle between the collector and horizontal (x) axis. The absorber used in the collector can get the most efficient energy when it is mounted as collector axis is absolute vertical to the sun rays. The angle of sun rays change related to hour and seasonal, hence the collectors must be directioned with the right angle and slope.

Home solar energy system owners have traditionally focused on installing panels on rooftops. However, wall mounting offers an alternative for properties with ...
