

How to identify the authenticity of capacitor brands

Where can I buy a capacitor?

Capacitors seem to be one of those things that is counterfeited a lot, so definitely want to buy from good sources like Digikey, Mouser etc. Avoid Ebay, Aliexpress, Amazon etc as you don't know what you're getting. Re: Capacitor brands? Vishay and Kemet are not "premium" grade electrolytic manufacturers.

How do I know if a capacitor is rated?

The rated voltage in V (100V for the first and 16V for the second capacitor) A code indicating the group number / series code (it's the "V" on the first capacitor and the "F" on the second) Either date code (usually two digits) or some lot number identification, or maybe both.

Should I buy capacitors from China?

Don't ever buy capacitors from China. Especially top brands from the post above. In addition to those there are: Vishay and Kemet are not "premium" grade electrolytic manufacturers. Kemet makes fine poly's and Vishay makes fine ceramic caps. I would not recommend either as first choice for Electrolytics.

Are there any good capacitor brands?

There are many good capacitor brands. Not in particular order.. I personally prefer Rubycon but for reasons of availability do sometimes use Panasonic/nichicon. There are also many other ok brands but i prefer the above. Re: Capacitor brands? Don't ever buy capacitors from China. Especially top brands from the post above.

What is a capacitor & how does it work?

A capacitor is a passive device on a circuit board that stores electrical energy in an electric field by virtue of accumulating electric charges on two close surfaces insulated from each other. This is a list of known capacitor manufacturers, their headquarters country of origin, and year founded.

How do you know if an electrolytic capacitor is polar?

It's usually fairly easy to tell the polarity of an electrolytic capacitor. It will behave like a poor quality diode junction. It should look like a capacitor when connected correctly and a diode with a relatively high voltage, about 1.5V to 3V, when connected backwards. I've just tested a capacitor using my meter's diode test function.

Those are plain multi-layer ceramic capacitors and are bipolar, or rather non-polarized.. The reason you are getting odd results is that you probably measure the capacitance while they are soldered into a circuit. This means that you ...
