

## How to make the power cord of the battery cabinet

How do you build a drill charging station cabinet?

Build Cabinet for Drill Charging Station I began by breaking down full sheets of 1/2" and 1/4" baltic birch. Then I cut rabbets on the back panel notch out for the 1/2" back piece. To do this, I set up my dado blade and a sacrificial fence. This allowed me to take the cut in one pass. With my sides ready I cut the pieces for the inner parts of the cabinet.

How do you connect a battery charger to a door?

Add each of the chargers to the door and route the wires inside. Plug in each of the wires into the power strip and tie up any extra wire using velcro cord organizers. For the smaller chargers that have a large plug, I placed them on the top shelf and plugged them into the power strip.

How do you mount a Ryobi charger to a wall?

In fact, the Ryobi charger was so close to the top that I just sent the wire in over the top. Make a hole in the side of the cabinet. This is where the power strip plug will exit to be plugged into the wall. There are multiple ways you can mount the charging station to the wall: Use a screw through the back into a stud. Using a French cleat.

How do I mount the battery to the wall?

Now the unit is ready to be mounted to the wall via four screws. Since the back plate has the keyhole mounting slots it's as easy as dropping the unit down on the screws on the wall and it is secure. Just plug the unit in with a PC power cord and you are ready to take charge of your battery situation for your home or shop.

How do you mount a charging station to a wall?

There are multiple ways you can mount the charging station to the wall: Use a screw through the back into a stud. Using a French cleat. I decided to use a French cleat because I didn't have two studs accessible in the space where I needed to add the cabinet.

How do you attach a back to a drill charging station?

Before attaching the back to the drill charging station, I drilled a hole for the power cords. I plan to keep a surge protector in the cabinet so this hole will allow the charging cord to run out. I used a forstner bit to drill the hole and a file to clean it up. Finally I checked the cabinet for square and glued and nailed the back into place.

5. Disconnect the power. Before you begin the process of hardwiring under cabinet lighting, it is important to make sure that the power to the area is disconnected. This can be done by turning off the breaker to the area or unplugging the power source. Make sure that the area is completely disconnected from power before

# How to make the power cord of the battery cabinet

beginning the ...

I would recommend a battery powered temperature alarm. In fact, once you have the alarm, I would recommend you power the refrigerator only as long as it needs to run, and then shut off the battery inverter altogether. Having the inverter "spun up" and making 120V requires a constant energy burn on the battery, even if it's not used.
