Why is it important to maintain the charging pile?

The importance of maintaining charging piles lies in the fact that influences by the changeable environment and ageing inner parts can cause various faults. Regular examination and maintenance are necessary during both product storage and using processes.

What are the charging pile instructions?

Instructions for Charging Pile-V1.3.0: Power Output Mode: Can be switched between intelligent mode and priority mode. In intelligent mode, the charging pile power is equally distributed between the two vehicle connectors.

How to reset a charging pile?

To reset a charging pile, swipe the card when faults are present and the settlement has been completed. The charging pile will enter a standby state after the faults are warned and reset.

What to do if charging pile is in working state?

If the charging pile is in working state, charging will be stopped immediately. A regular check of the lightning arrester firing pin or indicating window is necessary. If the firing pin is protruded or the indicating window is turned red, it means the charging pile requires attention according to the Charging Pile Instructions-V1.3.0.

What is the installation distance of the charging pile?

The minimum installation distances for the charging pile are: no less than 700 mm from the back door to the wall, and no less than 500 mm from the side face to the wall. (5) The canopy is built together with the charging pile. (6) This installation method is just a sample for reference.

How to start and stop the charging pile?

To start the charging pile, click the screen to select the charging mode, choose the charging connector, and begin charging. To stop the charging pile, enter the 'setting interface' -- function setting -- startup mode, and select 'start by button'.
