How to view the Russian battery issue

Will Russia's EV battery market be affected by sanctions?

June 2,2022: Russia said on May 14 it was introducing controls on lead exports amid fears sanctions could disrupt the country's heavy reliance on battery imports -- but analysts warn the global energy storage and EV batteries market is set to suffertoo.

Is Russia about to source more batteries?

With demand for those batteries only increasing as Russia mounts a more serious offensive to break a stalemate in eastern Ukraine, there is a scramble to source more. And not every cell company is about to source tens of thousands of those batteries on their own.

How will Russia and Ukraine affect electric vehicle batteries?

"Russia and Ukraine hold significant reserves of metals such as cobalt,nickel,platinum and palladium. Although for the prior commodities -- save for palladium,at 40% world mined supply -- neither are the world's foremost suppliers,priceswill be impacted and could impact electric vehicle batteries."

Is Russia a big importer of batteries?

Russia is also a "far bigger importer of finished batteries than it is an exporter",typically 160ktpa in versus 20ktpa out". CRU's lead analyst,Neil Hawkes,confirmed that all Russia's lead output comes from recycling,with no primary smelters.

What are Russian batteries made of?

Their key component is a battery made from nickel,cobalt,manganese,copper,aluminum,and,of course,lithium-- metals that are now called 'battery metals.' Russia is fully self-sufficient in nickel,cobalt,copper,and aluminum; manganese is imported from several sources,and only lithium is yet a major concern.

Why is Ukraine using high-capacity batteries?

With Russia regularly knocking out Ukraine's power grid, the country has turned to high-capacity batteries to keep it connected to the world--and itself. The streets of Kyiv during a blackout last year. Photograph: Mykhaylo Palinchak/Getty Images
