

Hybrid Energy Storage Inverter Design Specifications

What is a hybrid string inverter?

With the additional possibility of energy storage via batteries, hybrid string inverters provide a good outlet to maximize the power utilization of the string input, and also provide an alternate pathway to supply the grid during night or low irradiation scenarios.

What is a hybrid inverter?

Hybrid inverters and AC-coupled battery systems generally use transformer-less inverters with 'switching transistors'. These compact, all-in-one inverters have lower surge and peak power output ratings but are more cost-effective because they combine the solar inverter (MPPTs) and battery inverter-charger into one integrated unit.

What battery voltage does a hybrid inverter use?

All hybrid and off-grid inverters are designed to use a specific nominal DC battery voltage, the most common being 48V. Since most lithium battery systems are 48V, this is not a problem. However, many small-capacity inverters use 12V or 24V, so these are only compatible with battery banks of the same voltage.

Do you need a peak power rating for a hybrid inverter?

The peak power rating is very important for off-grid systems but not always critical for a hybrid (grid-tie) system. If you plan on powering high-surge appliances such as water pumps, compressors, washing machines and power tools, the inverter must be able to handle the high inductive surge loads, often referred to as LRA or Locked Rotor Amps.

What are the different types of hybrid and off-grid inverters?

Below are two main types of hybrid and off-grid inverters available. Off-grid inverters use heavy-duty transformers, which are more expensive but provide high surge and peak power output and can handle high inductive loads. These inverters typically contain active fan-forced cooling systems to help maintain performance in high temperatures.

Which inverter works with a high voltage battery system?

High-voltage or HV battery systems from 150 to 500V are increasingly common for grid-tied home battery systems, and many hybrid inverters such as the SolarEdge StorEdge, Goodwe EH and Fronius GEN24 Plus all work with high-voltage battery systems.
