What is a C&I energy storage system?

A C&I (Commercial and Industrial) energy storage system is an energy storage solution designed for commercial and industrial applications, such as factories, office buildings, data centers, schools, and shopping centers.

What are commercial and industrial energy storage solutions?

Our commercial and industrial energy storage solutions offer from 30kW to 30+MW. We have delivered hundreds of projects covering most of the commercial applications such as demand charge management, PV self-consumption and back-up power, fuel saving solutions, micro-grid and off-grid options.

How much does a C&I battery-based energy storage system cost?

Batteries may need to be replaced every 5 to 15 years and there may be ongoing costs to maintain the system in good working order. Considering these factors, a C&I battery-based energy storage system can cost anywhere from tens of thousands to hundreds of thousands of dollars or more, including installation.

What are the different types of C&I energy storage systems?

The main types of C&I energy storage systems include battery-based, thermal, mechanical, hydrogen energy storage, and supercapacitors. Battery-based systems are the most commonly used type of C&I energy storage systems. They store energy using electrochemical batteries such as lithium-ion, lead-acid, or flow batteries.
