Industrial and commercial wall-mounted solar thermal fluid working diagram

Are solar thermal systems suitable for industrial use?

The growth of solar thermal system for industrial use is slowrelative to the development solar thermal for residential application due to the higher level of temperature required for industrial process and the systems' low efficiency. A number of research works on the development of solar thermal systems is discussed.

How reliable is solar thermal system for industrial process?

The reliability of solar thermal system for industrial process is a dependant of the following; temperature level of the process heat, climate condition, system integration and design method. The aim of this review is to identify the trend of research development on solar thermal systems for industrial applications. II. PROCESS TEMPERATURE RANGES

How does a solar thermal system work?

The solar panel is always located at a lower level than the tank. The primary circuit of the solar thermal installation is as short as possible and with a continuous slope that facilitates natural circulation. The cycle of a thermosyphon system begins when solar radiation strikes the solar panel, with values greater than 200 watts/m2.

Does a solar thermal system work with a commercial boiler?

The solar thermal system integrates easily with any commercial boiler. The solar array can preheat make-up water to a boiler and/or reheat steam condensate. The technology can heat and type of fluid by using a heat exchanger.

Are solar thermal systems a good investment?

A well designed solar thermal system can provide up to 70% of a buildings annual needs. This is why solar thermal systems are one of the most cost-effective and environmentally-friendly renewable energy solutions available - reducing fuel bills and greenhouse gas emissions.

What is a solar thermal collector used for?

USES FOR SOLAR THERMAL ENERGY There are many processes that require heat energy. The most common usage of solar thermal collectors is to heat domestic hot water. This is a simple application that requires minimal disruption to the existing systems in the building and excellent payback in most applications.
