What are the charging pile instructions?

Instructions for Charging Pile-V1.3.0: Power Output Mode: Can be switched between intelligent mode and priority mode. In intelligent mode, the charging pile power is equally distributed between the two vehicle connectors.

Where should a charging pile be located?

1. Charging piles should not be located in places that are dusty or contain flammable, explosive, and corrosive objects. 2. The charging pile should be installed in a ventilated environment, and the ambient temperature should meet the requirements for normal charging of electric vehicles. 3.

What is the installation distance of the charging pile?

The minimum installation distances for the charging pile are: no less than 700 mm from the back door to the wall, and no less than 500 mm from the side face to the wall. (5) The canopy is built together with the charging pile. (6) This installation method is just a sample for reference.

How to install outdoor charging piles?

Necessary rain-proof and dust-proof measures should be taken for outdoor charging piles (such as membrane structure canopies). 1. Plan the installation location of charging equipment. It is recommended to install it near the power distribution room.

What is the grounding resistance of the charging pile protective ground terminal?

4. The grounding resistance of the charging pile protective ground terminal is less than 4Ω. 5. The charger should be installed vertically on the ground plane, and the deviation from the vertical position in any direction should not be greater than 5°. 6.

How to install charging equipment?

1. Plan the installation location of charging equipment. It is recommended to install it near the power distribution room. A distance of at least 1 meter should be left in front and behind the charging pile to ensure sufficient ventilation.

Modeling of fast charging station equipped with energy storage. Accordingly, a multidimensional discrete-time Markov chain model is utilized, in which each system state is defined by the photovoltaic generation, the number of EVs and the state of energy storage [12]. The work in [13] applies the energy storage in the charging station to buffer the fast charging power of the EVs, it ...
