The average cost of one light, including the lighting fixture, pole, and base, averages at \$2000. Not bad for the cost of one street light. Solar street lights utilize fixtures connected to a (typically) silicon-based solar panel to garner electricity through a process called the photovoltaic effect, which converts light into usable voltage.

Are solar lights better than traditional street lights?

While traditional lighting systems may have won some battles, solar lights win the war for street light costs. It's the combination of high-tech solar panels with energy-saving LED lights that propel these street lights far ahead of the competition.

How much does a split solar street light cost?

Split solar street light's cost varies according to its materials, poles, and installation. Typically, the entire set costs double the price of an integrated solar street light with its average cost ranging from \$150 to \$400. The installation is not yet included in this average total cost.

How much does a solar light cost?

These lights reside off the main power grid and can be installed in remote locations. Because of the advanced technology required for solar lights, they are more expensive, averaging about \$3000 per light. That includes the light fixture, the solar panel, controller, pole, and the smaller components that make up the light.

What are solar street lights?

The lighting fixture is commonly referred to as the bulb. To make better usage of solar energy, solar street lights use LED technology, because they are 68% more efficient than HPS fixtures. The energy produced from solar panels is stored in the batteries, and later on at night, is used by lighting fixtures, to illuminate public areas.
