

What happens when a lead acid battery is discharged?

The process is the same for all types of lead-acid batteries: flooded, gel and AGM. The actions that take place during discharge are the reverse of those that occur during charge. The discharged material on both plates is lead sulfate (PbSO_4). When a charging voltage is applied, charge flow occurs.

Why are VRLA batteries acid-starved?

Our VRLA batteries are designed to be "acid-starved." This means that the power (sulfate) in the acid is used before the power in the plates. This design protects the plates from ultra-deep discharges. Ultra-deep discharging is what causes life-shortening plate shedding and accelerated positive grid corrosion which can destroy a battery.

Can you put a lead-acid battery in a sealed container?

Do not install any lead-acid battery in a sealed container or enclosure. Hydrogen gas from overcharging must be allowed to escape. Always use a reliable, temperature-sensing, voltage-regulated, automatic charger. Because SVR batteries have immobilized electrolyte, they cannot spill or leak, even if punctured.

What is valve-regulated lead-acid (VRLA) technology?

Valve-regulated lead-acid (VRLA) technology encompasses both gelled electrolyte and absorbed glass mat (AGM) batteries. Both types are valve-regulated and have significant advantages over flooded lead-acid products.

Why are VRLA batteries protected against deep discharge?

Our VRLA batteries are protected against deep discharge because they are "acid-starved." This means that the battery uses the power in the acid before it uses the power in the plates. Therefore, the plates are never subjected to destructive ultra-deep discharges. never runs out of water.

Can a VRLA battery be used in a flooded battery?

VRLA batteries can be substituted in virtually any flooded lead-acid battery application (in conjunction with well-regulated charging), as well as applications where traditional flooded batteries cannot be used. Because of their unique features and benefits, VRLA batteries are particularly well suited for: What is a gel battery?

Zhejiang Hongda Special Rubber Products Co., Ltd. is China HD-308 Lead-acid battery safety valve Suppliers and OEM/ODM Company, details: With or without cap cap Valve Overall Height(mm) Bonnet Diameter(mm) Bezel Diameter(mm) Spool Diameter(mm) Snap/Thread(mm) Bezel Thickness(mm) Upper...

We are professional manufacturer of safety valves, safety caps, explosion-proof discs, terminal post sealing rings, O-rings, acid injection nozzles and polymer microporous plastics for lead-acid batteries, lithium batteries and ...

The company integrates scientific research, production and trade, pays attention to scientific and technological innovation, and strives to develop industrial battery safety valve products with high technology content and high quality ...

SAFETY DATA SHEET Valve Regulated Lead Acid Battery Non-Spillable Lead Acid Battery, Sealed Lead Acid Battery ... Emergency telephone number E-mail 2. Hazard(s) identification Physical hazards East Penn Manufacturing Company, Inc. 102 Deka Road, Lyon Station PA 19536 (610) 682-6361 East Penn EHS Department ... Valve Regulated Lead Acid Battery ...

The lead-acid battery safety valve has a one-way exhaust function; when the internal pressure of the battery exceeds an explosion limit, the rubber cap pierces through the hydrophobic...

Established in 1993, Zhejiang Hongda Special Rubber Products Co., Ltd. is a professional manufacturer of safety valves, safety caps, explosion-proof discs, rubber seals and polymer ...

SAFETY DATA SHEET 1. Identification Product identifier Valve Regulated Lead Acid Battery Other means of identification-Non-spillable Lead Acid Battery, Sealed Lead Acid Battery ... Manufacturer/Supplier East Penn Manufacturing Company, Inc. Address 102 Deka Road, Lyon Station PA 19536 Telephone number (610) 682-6361 Contact person East Penn EHS ...
