SOLAR PRO. Lithium battery interface disassembly

What is the disassembly process of lithium-ion traction batteries?

Disassembly Process of Lithium-Ion Traction Batteries The disassembly of lithium-ion traction batteries after reaching their end-of-life(EoL) represents a promising approach to maximize the purity of the segregated material.

How do you disassemble a lithium ion battery?

Currently, there are no standards or methodologies for conducting lithium-ion battery disassembly, but IEEE 1625, "Standard for Rechargeable Batteries for Multi-Cell Mobile Computing Devices," notes that to conduct disassembly: "... a specialized, highly trained operator is essential.

What information do I need for a lithium ion battery disassembly?

If a disassembly of the modules down to cell level is planned in the future, further information about the cells, e.g., design (pouch, prismatic, cylindrical), weight, and dimensions, are required. As mentioned before, lithium-ion batteries are labelled with a "Li-ion" symbol.

What is the best way to disassemble a battery?

Battery disassembly requires removing the plastic casing: automatizing partial disassembly (e.g., casing removal and cells recovery from battery packs) gave positive costs-benefits trade-off (Alfaro-Algaba and Ramirez, 2020); using a hybrid workstation (manually operated) resulted as best option for safety and costs (Tan et al., 2021).

What is a battery disassembly methodology?

The methodology involves upfront consideration of analysis paths that will be conducted on the exposed internal components to preserve the state (operational or failed) of the battery. The disassembly processes and exposures must not alter the battery materials once they are removed from their hermetically sealed containers.

How should a battery pack be disassembled?

Battery packs may contain complex control circuitry or a battery management system (BMS), which should also be removed. The disassembly process should avoid accidental shorting of the internal cells. A single cell battery should be stripped down so that all that remains are the external case and the cell itself.
