

Can lithium-ion batteries meet the demand for automotive applications by 2028?

The lithium-ion battery (LIB) is one of the most well-established energy storage technologies and has become a common part of everyday life. [ 1] However, to meet the expected gigantic demand for automotive applications, of around 1 TWh by 2028, product quality must be further enhanced and manufacturing costs need to be reduced. [ 2]

Can a lithium-ion battery be used for other battery types and manufacturing lines?

The provided model framework and optimization routine is easily adaptable for other battery types and manufacturing lines. The lithium-ion battery (LIB) is one of the most well-established energy storage technologies and has become a common part of everyday life. [1]

What is a lithium ion battery?

The first lithium-ion battery (LIB), invented by Exxon Corporation in the USA, was composed of a lithium metal anode, a  $\text{TiS}_2$  cathode, and a liquid electrolyte composed of lithium salt ( $\text{LiClO}_4$ ) and organic solvents of dimethoxyethane (glyme) and tetrahydrofuran (THF), exhibiting a discharge voltage of less than 2.5 V [3, 4].

What is a good N/P ratio for a lithium ion battery?

An anode-free configuration (0 N/P ratio) indicates no extra lithium is involved, which helps extend the life of LIBs. Thus, the recommended N/P ratio for full-cell configurations typically ranges between 1 and 1.2. The N/P ratio can be adjusted by varying the density of the anode materials.

How to determine the life of a lithium ion battery?

Specific capacity, energy density, power density, efficiency, and charge/discharge times are determined, with specific C-rates correlating to the inspection time. The test scheme must specify the working voltage window, C-rate, weight, and thickness of electrodes to accurately determine the lifespan of the LIBs. 3.4.2.

Are lithium-ion batteries a conflict of interest?

Open Access funding enabled and organized by Projekt DEAL. The authors declare no conflict of interest. With increasing electrification in the automotive field, lithium-ion batteries are rapidly becoming an inseparable part of everyday life. To meet the various governmental goals regarding CO<sub>2</sub> emissi...
