

How have lithium-ion battery prices changed over the last 10 years?

Lithium prices, for example, have plummeted nearly 90% since the late 2022 peak, leading to mine closures and impacting the price of lithium-ion batteries used in EVs. This graphic uses exclusive data from our partner Benchmark Mineral Intelligence to show the evolution of lithium-ion battery prices over the last 10 years.

Why are lithium-ion batteries so expensive?

The cost of raw materials, particularly lithium carbonate, plays a significant role in the pricing of lithium-ion batteries. The recent decrease in lithium prices has been a major factor in lowering battery costs. As lithium is a key component in these batteries, fluctuations in its price directly impact the overall cost of battery production.

How much does a lithium battery cost?

It costs around \$139 per kWh. But, it's much more complex. Understanding the lithium battery cost dynamics is important for manufacturers, investors, and consumers alike to make wise capital decisions. This article explores the current lithium batteries price trends, comparisons, and factors that decide these prices. So, dive right in.

Are lithium-ion batteries on a downward trend?

The price of lithium-ion batteries has been on a downward trend, reaching a record low of \$139 per kWh in 2023 and continuing to decrease into 2024. The reduction in lithium prices, increased production capacity, and technological advancements have all contributed to this trend.

When will lithium-ion batteries become more popular?

It is projected that between 2022 and 2030, the global demand for lithium-ion batteries will increase almost seven-fold, reaching 4.7 terawatt-hours in 2030. Much of this growth can be attributed to the rising popularity of electric vehicles, which predominantly rely on lithium-ion batteries for power.

Are lithium-ion batteries efficient?

Lithium-ion batteries are one of the most efficient energy storage devices worldwide. Over recent years, high-scale production and capital investment into the battery production process made lithium-ion battery packs cheaper and more efficient.
