

What is a battery energy storage system?

Electricity storage systems play a central role in this process. Battery energy storage systems (BESS) offer sustainable and cost-effective solutions to compensate for the disadvantages of renewable energies. These systems stabilize the power grid by storing energy when demand is low and releasing it during peak times.

What is the battery energy storage roadmap?

This Battery Energy Storage Roadmap revises the gaps to reflect evolving technological, regulatory, market, and societal considerations that introduce new or expanded challenges that must be addressed to accelerate deployment of safe, reliable, affordable, and clean energy storage to meet capacity targets by 2030.

When will battery energy storage systems (BESS) become more popular?

2024 was a record year for deployment of battery energy storage systems (BESS). We predict even higher implementation in 2025. A marked increase in the availability and use of second life batteries within the energy storage sector with EV manufacturers seeking to maximise the value of batteries.

Where do battery energy storage systems come from?

At present, battery energy storage systems are predominantly coming from outside the EU. So an emphasis on UK and EU production - and the creation of a circular ecosystem which emphasises second life systems - should be a strategic goal for countries in the year ahead.

Is energy storage transforming the energy system?

The transformation is clear - energy storage has established its role in the energy system and is moving to mainstream adoption. By 2025, global energy storage capacity is expected to exceed 500 GWh, driven by renewable energy integration, grid stabilisation needs and growing concerns about resilience.

How to generate revenue from battery energy storage systems in Europe?

To generate revenue from battery energy storage systems in Europe, companies need to be strategic and take advantage of different markets and services. Capacity markets, for example, offer a stable source of income: payment is made for the provision of reserve capacity.
