

How can electrochemical technologies help a greener planet?

Electrochemical technologies for a greener planet. From the production of green hydrogen to energy storage for the grid to the processing of lithium that helps power electric vehicles, we develop electrochemical processes to tackle the global challenges of climate change, waste management, and pollution reduction.

What is NORSCAND's electrolysis technology?

NORAM Electrolysis Systems has recently completed an extensive validation program using NORSCAND's Electrolysis technology, producing 25m³ of high-purity battery-grade lithium hydroxide. This program was conducted in partnership with Lithium Energy SA...

What is Johnson Controls battery storage & energy solutions?

Johnson Controls Battery storage and energy solutions systems from Johnson Controls allow for seamless integration with existing building technology systems. These utilise algorithms that provide for flexible and custom applications, the company says, such as demand management, frequency regulation and integration with renewables.

Why is Panasonic a leading energy storage company?

Thanks to a wide and varied portfolio of solutions, Panasonic has positioned itself as one of the leaders in the energy storage vicinity. Panasonic is one of the industry's top names due to its advances in innovative battery technology alongside strategic partnerships and extensive experience in manufacturing high-quality products.

Is Tesla Energy a good energy storage company?

Tesla Energy's energy storage business has never been better. Despite only launching its energy storage arm in 2015, as of 2023 the company had an output of 14.7GWh in battery energy storage systems. Its portfolio includes storage products like the Powerwall and the Megapack.

What is a NORSCAND's electrolyser?

The NORSCAND's electrolyser combines an electrical driving force with state-of-the-art coatings and membranes, to drive waste and raw product streams to high-value and reusable chemicals. The NORSCAND's Electrolyser has been successfully deployed for lithium hydroxide production, lithium-ion battery recycling, and sodium sulphate salt-splitting.
