How will Australia's battery system costs change over the next 10 years?

Wood McKenzie. Battery system costs are critical. Costs of battery modules are expected to fall by 40% in Australia by 2032. This will push down costs of overall battery systems by about 20% over the next ten years. Wood Mackenzie in their report predicted that SWB will undercut coal and gas as soon as 2028 in Australia (Figure 2).

How will battery technology change the world?

In the coming years, battery technology will continue accelerating the transition toward renewable sources and decreased reliance on fossil fuels. In turn, the industry and consumers can expect more efficient and affordable battery solutions to create a healthier planet.

What if Australia produces less battery energy?

If they produce less, they bring it in. Australia leads the world in developing battery energy storage systems (BESS). Wood Mackenzie reported the country has announced BESS capacity, now 2 GW, may reach 20 GW by 2030. This would be incredible growth, as it amounts to 28% growth year-over-year for 6 years.

Power batteries are the core of new energy vehicles, especially pure electric vehicles.
