

When should a rechargeable battery be left on the Charger?

When a rechargeable battery is first charged, it should be left on the charger until fully charged. Removing it before it is fully charged could prevent it from reaching its full charge level. Also, frequently charging it without letting it reach a full charge could similarly reduce its charge.

Are rechargeable batteries 'charged'?

Batteries left for in a very low state of charge for long periods of time can also experience the same changes, so although they can report being 'charged', the active materials inside and available to power devices are limited. (see Why do rechargeable batteries die for a full explanation on this process).

Why is my rechargeable battery not charging?

One common reason for rechargeable batteries not charging is an insufficient charge. If the battery is completely drained, it may take a while for the charging process to initiate. In some cases, the battery may require a minimum charge level to start accepting power. 2. Faulty Charging Equipment Another possible cause is faulty charging equipment.

Why do rechargeable batteries lose charge over time?

Rechargeable batteries lose their ability to hold a charge over time due to a phenomenon called "voltage depression." This occurs when the battery is not fully discharged before being recharged, causing the battery to remember the reduced capacity.

Why are my rechargeable AA batteries not charging?

A faulty charger can prevent your rechargeable AA batteries from charging due to issues such as inadequate power supply, improper connection, and malfunctioning components. These factors affect the charging process and can lead to a situation where the batteries do not charge at all.

Is it worth buying rechargeable batteries?

The decision of whether rechargeable batteries are worth the money depends on the situation and the condition of the battery. If the battery is old, it may be more cost-effective to purchase a new one, as rechargeable batteries will not last forever. They will eventually begin to hold less and less of a charge.

The charger that I used is a modified GoPro battery charger that has leads with small magnets on them. I attach these leads to a battery and it charges the battery, but ONLY single cell batteries ...
