

Regulations for installing solar panels on rooftops

Do you need planning permission to install solar panels on your roof?

An increasing number of people are investing in solar energy. More and more homes are having solar panels, or solar tiles, installed on their roofs. Of course, with such installations, the topic of planning permission and building regulations often comes to the surface.

Can solar panels be installed on a roof?

Building regulations require solar panels to only be installed if there is structural integrity. This clearly states that the roof must be examined to confirm it can hold solar panels. An installer is essential to check the weight of the solar panels that will be supported by the roof.

What are the regulations for installing solar panels in the UK?

Whether you're installing on a residential roof or a larger property, let's take a look at some of the regulations for installing solar panels in the UK. Arguably, the most important regulations for those looking to install solar panels on their property are those that consider the placement or positioning of the solar panels.

Can solar panels be installed on a front-facing roof?

To avoid planning permission, you must abide by the following conditions. The solar panels installed must not protrude more than 200mm from the plane of the roof and cannot be installed on a front-facing roof slope unless the property is a listed building, or known to be in a conservation area.

Can I install solar panels if I don't meet building regulations?

Your local authority can also apply for a Confiscation Order to take away any money you've earned with your system - so there's absolutely no benefit to installing solar panels that don't meet building regulations. It's crucial that your solar installation follows all building regulations.

How far can solar panels protrude from a roof?

Panels must not protrude more than 200mm from the roof. This helps to protect the appearance of the building. The solar panels must not affect the structure of the roof or the appearance of the property. A certified installer must confirm the roof can bear the weight of solar panels.

Photovoltaic and solar thermal collector panels are being increasingly added to existing roofs. This best practice note provides guidance on the effect of retro-fit installation of panels on existing domestic-scale roof structures and how this affects compliance with the functional requirement A1

Permissions for solar panels on a pitched roof. Installing solar panels on a pitched roof usually falls under permitted development, meaning no planning permission is required, provided certain conditions are met. The panels must not protrude more than 0.2 metres from the roof surface and cannot exceed the highest part of the
