

# Research report on energy storage project financing models

How are financial and economic models used in energy storage projects?

Financial and economic modeling are undertaken based on the data and assumptions presented in Table 1. Table 1. Project stakeholder interests in KPIs. To determine the economic feasibility of the energy storage project, the model outputs two types of KPIs: economic and financial KPIs.

How can a financial model improve energy storage system performance?

The model may integrate more data about energy storage system operation as they have an impact on the system lifetime. This will have an influence on the financial outcomes. The existing financial model may be enhanced by adding new EES technical details. There are various valuation methods for energy storage.

Should the energy storage industry evaluate policies and financing models?

The next consideration is for the energy storage industry to evaluate the policies and financing models that have allowed the renewable energy industry to expand over the last decade and to replicate what worked well and improve on the identified shortcomings.

Is there a financial comparison between energy storage systems?

There is a scarcity of financial analysis literature for all energy storage technologies, and no explicit financial comparison exists between different energy storage systems. Current studies are simplistic and do not take into consideration important factors like debt term and financing sources.

Is a project investment in energy storage a viable investment?

The project investment in all the studied energy storage systems is demonstrated viable to both project sponsors and lenders since the IRRs of the project for all systems in their last year of operation are larger than the projected WACC and the IRR of equity in their maturity year are better than the return on equity. 5. Financial analysis

What is a revenue based energy storage system?

The sales generated by the project are referred to as revenue. The revenues for an energy storage system performing energy arbitrage service are the product of the agreed energy price with the net discharged power.
