

What is the Asia-Pacific primary battery market?

The Asia-Pacific Primary Battery Market is segmented by Type (Primary Alkaline Battery, Nickel-Cadmium (NiCD) Battery, Nickel-Metal Hydride (NiMH) Battery, and Other Types) and Geography (China, India, Japan, South Korea, and the Rest of Asia-Pacific). For each segment, the market size and forecasts have been based on USD billion.

Will China's battery industry outperform the global market in 2023?

By our estimates,utilization at battery factories in China languished at under 50% over the first eight months of 2023. Exports are helping to offset some of the pain,with China's share of the global battery market on the rise. We believe battery makers with stronger export channels and global alliances will outperformin the coming years.

Are Asia's top battery players a global leader in the EV supply chain?

Asia's top battery players have taken a lot of risks to be global leaders in the EV supply chain. They've built up capacity for a market that has not yet fully arrived. To keep their lead,they now need to shift more investments abroad,even with oversupply in some home markets.

Why is China's battery industry struggling?

China's battery industry is the most vulnerable to consolidation over the next few years,due to overcapacity. By our estimates,utilization at battery factories in China languished at under 50% over the first eight months of 2023. Exports are helping to offset some of the pain,with China's share of the global battery market on the rise.

Who are the key players in the Asia-Pacific primary battery market?

The Asia-Pacific primary battery market is fragmented. Some of the major players (in no particular order) include Camelson Battery Co. Ltd, Duracell Inc., Energizer Holdings Inc., FDK Corporation, and Panasonic Corporation.

Will China's battery industry survive?

Some weaker ones in China may not survive. China's battery industry is the most vulnerable to consolidation over the next few years,due to overcapacity. By our estimates,utilization at battery factories in China languished at under 50% over the first eight months of 2023.

Carmakers and suppliers in Central Asia aim to benefit from streamlined logistics in the region, and are well positioned to be become a connecting link between Europe ...

OSAKA -- Panasonic Holdings plans a record 700 billion yen (\$5.05 billion) in capital spending for the fiscal year ending March 2024, with more than half going toward increasing output of electric ...

When it comes to Asia, batteries with a total capacity of one terawatt hour (TWh) were manufactured in 2023 for use across EVs, energy storage and consumer electronics, with ...

The rush to sell is the Swedish company's latest effort to strengthen its finances and shrink the business to focus on battery cell production, rather than being an all-in-one ...
