

Single-phase self-priming pump capacitor wiring diagram

What is a single phase pump?

Most pumps are either single phase or three phase. Single phase pumps are used in most residential applications. A single phase motor has two wires: a black "hot" wire and a white "neutral" wire. Once the type of pump has been determined, the next step is to identify the wires associated with the pump.

What are taro single phase capacitor start and run high speed monoblocks?

Taro Single Phase Capacitor Start and Run High Speed Monoblocks are manufactured using high quality raw materials and components using state-of-the-art manufacturing facilities and will give trouble free performance if properly installed and maintained. These monoblocks are compact pumping systems with the pump and motor mounted on a common shaft.

How do I use a single phase self-priming monoblock?

Use a single power cable from the power source to the Single Phase Self-Priming Monoblock. Do not use a power cable with large number of joints as this can result in a significant voltage drop. Do not use this pump for oil, toxic, corrosive and flammable liquids. Pumping flammable liquids could cause explosion.

How does a capacitor start motor work?

When it comes to wiring any sort of motor, it's important to understand the basics of how the motor works. In a single-phase capacitor start motor, there are two windings: a main winding and a start winding. The start winding is connected to a capacitor, which creates an additional phase shift between the current in the two windings.

What is a self priming centrifugal pump?

Self priming centrifugal pump with excellent suction capacity even in the presence of air bubbles. Suitable for pumping water with low levels of sandy impurities. Especially used in domestic water supply installations. Suitable for small farms and gardening, small scale industrial services and where self priming is necessary.

How do you identify a single phase motor?

A single phase motor has two wires: a black "hot" wire and a white "neutral" wire. Once the type of pump has been determined, the next step is to identify the wires associated with the pump. The wires should be labeled on the pump itself. If not, look for a label on the motor housing that will indicate the wire colors.
