

How much does a smartcore battery weigh?

14.4 V SmartCore battery with LED display with a capacity of 6.9 Ah/99Wh. This battery weighs 430g and was specially developed for the Alpha. For attaching the battery e.g. to the bicycle frame, a short and a long Hook&loop strap with anti-slip coating are included. Dimensions: 146x41x48 mm. Cable length at battery approx. 12cm.

## What are smart batteries?

RRC Power Solutions Smart Battery Packs are able to communicate via SMBus (SMART standard) /I2C. They feature Lithium-Ion technology for use in medical, military, and industrial applications. These batteries are designed for use with RRC-SMB-MBC and RRC-SMB-UBC chargers.

## How do I check the battery capacity of the smartcore?

The SmartCore battery comes with powerful electronics: simply push the control panel and the remaining battery capacity will be indicated in steps of 20 %.

## What is a battery core?

Essentially, a battery core is a redeemable fee. It's called a core and promotes recycling and reuse of items that can be rebuilt. It's such an important fee that 30 out of 50 states have laws supporting its implementation. The core is usually between \$5-15 per battery.

## How does smartcore work?

The optional SmartCore technology offers even more. By pressing the button, colored LEDs and an audible signal instantly indicate how much energy is left. You simply attach your battery to the bike frame. Our silicone-coated hook and loop fastener strap holds your battery securely and firmly in the desired position.
