

## **Smart warehouse replacement system battery cannot recognize the system**

Why is my ups battery not working?

Cause : When there are more than one battery cartridge installed in a system, and the UPS system is in on-line or standby state, a disconnected battery cartridge may not be reported immediately. Resolution: This is normal operation and does not indicate an issue with the UPS or the batteries.

What happens if you replace a battery module?

If you replace the battery module, you must adhere to all safety instructions. If your system has a module containing a lithium battery, replace it only with the same module type made by the same manufacturer. The battery contains lithium and can explode if not properly used, handled, or disposed of.

Can I replace two batteries at the same time?

Do not replace both batteries at the same time. If both batteries need to be replaced, replace them while the system is operational, and replace one battery at a time so that the configuration data on the battery to be replaced is copied to the replacement battery.

What should I do if I replace a battery module?

The battery module must be handled correctly to avoid possible danger. If you replace the battery module, you must adhere to all safety instructions. If your system has a module containing a lithium battery, replace it only with the same module type made by the same manufacturer.

What happens if a battery pack does not reset?

Packs can include cut offs for short-circuit, overload protection, older ones with a resettable polyfuse, which resets after disconnected. If protection was tripped and has not reset, then I suppose the battery has to be replaced. Depends on whether you can figure out the circuit in the battery pack.

What if a battery module fails?

If the battery module failed due to other conditions, return it to IBM. Follow all packaging instructions, and use any packaging materials for shipping that are supplied to you. You can replace a battery module if the battery fails.

Resolution: This is normal operation and does not indicate an issue with the UPS or the batteries. When a battery cartridge is disconnected in a system with more than one ...
