

What is a sodium sulfur battery?

A sodium-sulfur (NaS) battery is a type of molten-salt battery that uses liquid sodium and liquid sulfur electrodes. This type of battery has a similar energy density to lithium-ion batteries, and is fabricated from inexpensive and low-toxicity materials.

How does a sodium-sulfur battery work?

The sodium-sulfur battery uses sulfur combined with sodium to reversibly charge and discharge, using sodium ions layered in aluminum oxide within the battery's core. The battery shows potential to store lots of energy in small space.

What is a high temperature sodium sulfur battery?

High-temperature sodium-sulfur (HT Na-S) batteries were first developed for electric vehicle (EV) applications due to their high theoretical volumetric energy density. In 1968, Kummer et al. from Ford Motor Company first released the details of the HT Na-S battery system using a γ -alumina solid electrolyte.

Who makes sodium sulfur batteries?

Utility-scale sodium-sulfur batteries are manufactured by only one company, NGK Insulators Limited (Nagoya, Japan), which currently has an annual production capacity of 90 MW. The sodium sulfur battery is a high-temperature battery. It operates at 300–350°C and utilizes a solid electrolyte, making it unique among the common secondary cells.

Are metal anodes used in sodium-metal batteries (SMBs)?

This comprehensive Review focuses on the key challenges and recent progress regarding sodium-metal anodes employed in sodium-metal batteries (SMBs). The metal anode is the essential component of emerging energy storage systems such as sodium sulfur and sodium selenium, which are discussed as example full-cell applications.

Does a room-temperature sodium-sulfur battery have a high electrochemical performance?

Herein, we report a room-temperature sodium-sulfur battery with high electrochemical performance and enhanced safety by employing a "cocktail optimized" electrolyte system, containing propylene carbonate and fluoroethylene carbonate as co-solvents, highly concentrated sodium salt, and indium triiodide as an additive.
