

How do you install flexible solar panels?

Many actually come with an adhesive backing, but either way, the installation of flexible solar panels is a breeze. You simply clean the area where the panel will lay, stick the panel down (avoiding any uneven surface that could affect the adhesive's ability to stick), and surround the edges with a good sealant tape like Eternabond. That's it!

Can I mount a flexible solar panel?

While it seems simple to mount a flexible solar panel, common installations such as sealing around the edges of the solar panel and direct adhesion of the solar panel to a surface using Sikaflex and most other adhesives WILL damage the solar panel AND void your warranty, please continue reading the guide for more details.

How to choose a flexible solar panel?

Lightweight: Flexible solar panels should be portable and easy to bring around, especially if your vehicle is small. Try looking for ultra-light panels that go from 3-5 lbs. You could also opt for slim ones, as thin flexible solar panels are likely to bend more. Plus, when your panels are light and easy to carry, the installation will be a breeze.

How to install a solar panel?

Mark the area where you want to install the solar panel, clean and dry it. Start off by applying a spray film on the marked area to protect the surface from the 3M Hi-strength 90 spray. Now spray the 3M Hi-strength 90 spray on top of the film and wait to cure. Turn your flexible solar panel and apply the adhesive on the backside.

What do I need for a flexible solar panel?

You're going to need the flexible solar panels—refer to our top picks on our ["/flexible-solar-panels"](#) page. You'll also need a high-quality adhesive, a measuring tape, a clean cloth, and your personal protective equipment (PPE), such as gloves and goggles. Make sure your work surface is flat and stable.
