

How do you install solar panels on a roof?

Rail and Panel Installation The cheapest and most practical way to install solar panels is with a combination of rails and brackets. A secure hook is fastened to the rafters underneath your roof tiles and the rails are attached to these exposed hooks across the length of the solar array.

Can you install ground-mounted solar panels on a pitched roof?

You can install ground-mounted solar panels, though you'll again need more space than you would if you installed panels on a pitched roof. This is because you'll need to space out your panels so they don't cast shade on each other, just like on a flat roof.

How do I find a solar panel installer?

Use our Trusted Traders search tool to find a solar panel installer in your area. Some energy providers also install solar panels, and might offer alternative financing options. You can find out more about getting solar panels through an energy supplier. How can I ensure my solar panel installation goes well?

How are solar panels fixed to a roof?

How are solar panels fixed to the roof? Installers fix solar panels to a roof by lifting up some roof tiles and attaching mounting brackets to the rafters, before carefully placing the tiles back where they were. They'll then attach rails to these brackets, before locking solar panels into the rails.

How do I install a solar PV system?

The first step in installing a solar PV system is meeting with a qualified solar installer. During this initial consultation, the solar company will: - Assess your energy needs : By reviewing your electricity bills and understanding your consumption patterns, the installer can recommend the right size and capacity of the solar system.
