

How do solar panels work in the UK?

Installing solar panels lets you use free, renewable, clean electricity to power your appliances. You can sell extra electricity to the grid or store it for later use. There are over 1.3 million installations on homes across the UK - see where the UK solar panel hotspots are. Let's look at how they work and whether they're suitable for your home.

Why is solar energy so popular in the UK?

The popularity of solar panels is skyrocketing. More than 1.3 million rooftops in the UK are now decked out with panels - and with solar panel costs decreasing massively over the past decade, it's more accessible than ever. But why could solar energy benefit you? Well, first and foremost, it can cut your monthly electricity bills by around 70%.

How many solar panels are there in the UK?

There are now 1.5 million solar panels on homes across the UK. As well as saving you money on energy bills, solar panels can earn you cash. And don't worry, they can still generate electricity on gloomy days, vital when the weather's as dull as dishwater.

Can solar panels save you money?

Solar panels could help you save £100s a year on your electricity bills. Using the energy you generate can mean big savings for some households. You can get paid to export electricity you generate but don't use through the smart export guarantee (SEG). An average home could earn up to £320/year.

Why do people install solar panels?

Solar panels are often marketed as a way to save money on electricity - and sometimes as a way to make money too. This is because you can get paid for the electricity they produce that you don't use. Of course, many people install solar panels for other reasons.

Do solar panels generate electricity?

Solar PV panels generate electricity. Solar thermal panels generate heat. Both types use the sun but the technology they use to capture its energy is different. Read about solar water heating with solar thermal panels. How long do solar panels take to pay for themselves?
