

What is a tantalum capacitor?

The tantalum capacitor, because of its very thin and relatively high permittivity dielectric layer, distinguishes itself from other conventional and electrolytic capacitors in having high capacitance per volume (high volumetric efficiency) and lower weight. Tantalum is a conflict resource.

Why are tantalum capacitors polarized?

Tantalum capacitors are polarized due to reactions which take place during the forming of the dielectric layer, as the layer of oxide, which acts as a semiconductor, forms between tantalum oxide and pure tantalum. The dielectric layer is formed at a voltage higher than the operating voltage of the capacitor.

How is tantalum used in electronics?

Thanks to its unique properties, tantalum is used in electronics circuitry in various forms, products, and applications. The three primary devices in which tantalum is used in the electronics industry are capacitors, semiconductors, and surface acoustic wave (SAW) filters. A brief description of each follows:

Are tantalum electrolytic capacitors SMD?

More than 90% of all tantalum electrolytic capacitors are manufactured in SMD style as tantalum chip capacitors. It has contact surfaces on the end faces of the case and is manufactured in different sizes, typically following the EIA -535-BAAC standard. The different sizes can also be identified by case code letters.

How were tantalum capacitors made?

They ground metallic tantalum to a powder, pressed this powder into a cylindrical form and then sintered the powder particles at high temperature between 1,500 and 2,000 °C (2,730 and 3,630 °F) under vacuum conditions, into a pellet ("slug"). These first sintered tantalum capacitors used a liquid electrolyte.

What is a 10 F 30 VDC rated tantalum capacitor?

10 mF 30 VDC-rated tantalum capacitors, solid electrolyte epoxy-dipped style. A tantalum electrolytic capacitor is an electrolytic capacitor, a passive component of electronic circuits.

Starck Solutions" tantalum is supplied to semiconductor level quality standards including ship to control and is certified

Global Advanced Metals (GAM) is the best choice for tantalum for thin films via physical vapor deposition (PVD) in semiconductor processes. GAM is a fully integrated producer of tantalum sputtering materials, serving the demanding ...

High Energy, Tantalum, Capacitors manufactured by Vishay, a global leader for semiconductors and passive electronic components.

Vishay's VITA Spice simulation software provides design engineers the ability to analyze electrical and performance characteristics of its tantalum and polymer capacitors by part number to determine the best solution for their application. Results are presented in three charts showing impedance and ESR, CAP and ESL, ripple current and voltage vs. frequency.
