

Battery-on-a-chip offers many advantages as promising applications in lab-on-a-chip, smart medical implants, military, communications, microelectromechanical systems, etc. ...

In Trolley Mode, well-controlled charging of the energy storage from the DC trolley systems has to be possible. This correlates to an input voltage range from 400VDC to ...

Photo by Brian Kostiuk on Unsplash THE REQUIREMENTS OF NEW SEMICONDUCTOR PRODUCT DEVELOPMENT The semiconductor industry is driving on top of the products that different companies introduce. These ...

Through the innovative application of a semiconductor production technique, the Argonne researchers demonstrated a significant advancement in the field of battery technology. Their work solved some ...

As semiconductor manufacturing is a highly automated process that takes place in a clean-room environment, 5% of PFASs used are estimated to enter the environment during semiconductor production. 88 There also ...

Today, semiconductors are important technology enablers that power many of the cutting-edge digital devices. The global semiconductor industries are assigned to maintain its robust growth due to ...

A new technical paper titled "Exploring Active Learning for Semiconductor Defect Segmentation" was published by researchers at Agency for Science, Technology and Research (A*STAR) in Singapore. "We identify two unique challenges when applying AL on semiconductor XRM scans: large domain shift and severe class-imbalance. To address these ...

most successful full-sized batteries--cylinder batteries. In addition to discussing in detail the technical difficulties of reducing the size of on-chip microbatteries with various structures and potential solutions, this Perspective highlights the following two basic requirements for eventual integration in microcomputers:

Experts at the Table: Semiconductor Engineering sat down to discuss reliability of chips in the context of safety- and mission-critical systems, as well as increasing utilization due to an explosion in AI data, with Steve ...

27 Chips Competence Centres will enhance technical expertise and skills development in the semiconductor sector. ... Battery Production. Battery Recycling. Carbon Capture. Technology. ... Strengthening Europe's semiconductor sector. The Chips Competence Centres are set to play a fundamental role in strengthening Europe's ...

Challenges of Dynamic Characterization of Power Semiconductor Bare Chips. Static characterization of power semiconductor bare chips is not too difficult. The chip is physically fixed tightly on an electrically conductive stage for drain contact, and the source and gate are probed using needles from the top side of the chip.
