

The lithium battery is charging with a yellow light

What does a yellow light on a Schumacher battery charger mean?

Your Schumacher battery charger is blinking a yellow light. Normally, the light on a Schumacher battery charger is either yellow or green. Yellow indicates charging and green indicates that the battery is full. If you see a blinking yellow light, this means that your battery is in "Abort mode". Why does the charge light on the battery charger flash?

What does a blinking yellow light on a battery charger mean?

When you see a blinking yellow light on a battery charger, this means that the charger is receiving power and is working properly. However, the battery itself may not be charging. This could be due to a number of reasons, such as a low battery or a problem with the charger itself.

What does a yellow light on a battery mean?

The yellow light remains steady on throughout absorption until the battery is fully charged, then it switches to solid green. So in summary, yellow light means the charger is applying the finishing touches to complete the charging process. Just let it be until it switches to green and you're good to go.

What does a green light mean on a battery charger?

The charger also enters maintenance mode when the green light is solid. This keeps the battery voltage topped off as needed if the charger remains connected. The green light may flicker on and off periodically during maintenance. Leaving the charger hooked up for days or weeks with a solid green light won't hurt the battery.

What does a battery charger light mean?

Most battery chargers have a light that indicates when the charger is connected to power and when it is charging the battery. Some chargers also have lights that indicate if the battery is fully charged or if there is an error with the charger or battery. The first light, usually green, shows that the charger is plugged in and receiving power.

What does a red light on a battery charger mean?

These are: Red - It indicates that the charger is not connected to power, or the batteries are not installed correctly. Yellow - This light indicates that the charger is connected to power, but no batteries are present. Green - It indicates that the charger is connected to power, and the batteries are fully charged.
