

Are solar panels worth it?

Solar panels are definitely worth it in the UK. The average three-bedroom household will save 70% on its electricity bills by going solar, and break even on the cost of its panels after just 15.66 years. It's a large upfront cost - but if you can afford it, solar panels make an excellent investment.

How much do solar panels cost in the UK?

According to the Energy Saving Trust, the average solar panel system in the UK is 3.5kWp, with an overall average cost of £7,000. That can rise to as much as £9,000 for a 5kWp system if you have a larger home. These figures represent the total cost, including the panels themselves and the installation costs, which can be substantial.

Do solar panels increase property value?

Solar panels are attractive to potential new homeowners when you next sell your home, which can increase your property value as a result. That might seem like a long time, but it's worth remembering that solar panels can provide all of your energy needs, making your home potentially energy self-sufficient.

How much do solar panels add to the value of a home?

The fact is, it's the opposite. But by how much? A report by Octopus Energy produced in collaboration with the Sustainable Markets Initiative shows that solar panels can add £1,350 - £5,400 (0.5 - 2.0%) to the value of an average home.

Can solar panels save you money?

Solar panels could help you save £100s a year on your electricity bills. Using the energy you generate can mean big savings for some households. You can get paid to export electricity you generate but don't use through the smart export guarantee (SEG). An average home could earn up to £320/year.

Why are solar panels so expensive?

This is because each area's local distributor has its own charges set for suppliers - and energy providers then pass these additional costs onto customers through their energy bills. If a property with solar panels is in an area where energy prices are particularly high, it will become much more valuable.
